SUMMARY

Strategic and analytical HR Professional with progressive experience in workforce planning, resource optimization, and talent mapping across tier-1 corporate ecosystems including EY GDS and TCS. Adept at partnering with business unit heads to forecast manpower needs, analyze talent supply pipelines, and manage bench strength to ensure robust talent deployment for business-critical roles. Proven expertise in managing data validation for workforce tracking, aligning allocation frameworks with project timelines, and monitoring operational metrics to support employee lifecycle interventions. Combines an advanced MBA foundation with data storytelling to provide actionable insights to senior leadership, resolve allocation conflicts, and enhance team productivity.

Professional Experience

Associate Resource Manager – Workforce Analytics & Operations, Nov 2025 – Present
EY(GDS) – Bengaluru, KA,India.

- Collaborate with business unit heads and service line leads to analyze talent supply and demand pipelines, driving strategic workforce planning and talent mapping to secure robust pipelines for critical roles.
- Evaluate bench strength and map technical skill profiles to project requirements, facilitating internal career mobility and proactive talent deployment to meet business-critical demands.
- Conduct structured cadence meetings with delivery leads to track onboarding status, compliance parameters, and performance metrics, leveraging data insights to optimize organizational effectiveness.
- Spearhead the adoption of newly implemented enterprise resource management platforms, acting as the team's Subject Matter Expert (SME) to train peers on system workflows and enforce strict data governance standards.
- Leveraged Microsoft Copilot to architect custom VBA macros and advanced MIS templates, converting complex weekly data into streamlined views to assist leaders with succession planning metrics.
- Engineered 3 distinct executive reporting templates—covering pipeline demand, real-time booking statuses, and overbooking risks—to optimize operational and capacity projections for leadership review forums.
- Eliminated manual data processing bottlenecks for the wider team by deploying automated macros across demand and overbooking workflows, significantly reducing reporting turn-around time.
- Identified technical system gaps, documented internal shortcuts to boost team productivity, and delivered critical feature enhancement recommendations to platform developers to improve the overall employee experience.

Associate Resource Manager – HR MIS & Operations, TCS – Chennai, TN,India. Aug 2022 – Nov 2025

- Managed end-to-end manpower forecasting, headcount tracking, and resource deployment schedules for large-scale departments, owning data validation to align with strict project timelines.
- Tracked and analyzed monthly and quarterly attrition trends across varied roles, tenures, and business segments, providing actionable insights to senior leadership for talent management and retention planning.
- Resolved critical resource allocation conflicts and minimized project dependencies by initiating rapid internal talent reallocation's, acting as an escalation point to resolve complex employee concerns.
- Monitored regional bench strength and capacity metrics to facilitate internal movements, successfully executing data reconciliations to support framework alignment for Annual Salary Reviews (ASR).
- Generated regular operational dashboards, trend snapshots, and staffing forecast reports for senior leadership to drive data-backed human capital decisions and solutions.
- Supervised and mentored junior team members, establishing standard operating procedures for resource tracking, data quality control, and management reporting while fostering a culture of rewards and recognition.
